THERMALLY BROKEN WINDOW AND DOOR SYSTEMS

# Flush Glazed Framing

# Flush Glazed Thermally Broken Framing

Alspec's ThermAFrame Flush Glazed system is a high performance energy efficient framing option that utilises the latest in European Polyamide Thermal Break technology.

Combined with Australian design principles this achieves the best possible results in energy rating in a system that is easy to fabricate and install. Its versatility allows countless specifications to be achieved, from standard shopfront applications through to low rise curtain wall applications. It has been designed to accommodate high performance double glazed units that can maximise the performance of the building envelope.

Available in two frame depths 101.6mm and 150mm x 60mm, ThermAFrame Flush Glazed allows architects to minimise the transfer of heat or cold across a window with a standard system.

With the use of heavy duty mullions the ThermAFrame 150mm Flush Glazed system with a myriad of mullion and reinforcing splice options can allow heights to reach and surpass 4.5m depending upon wind loading conditions.

## Key Features

- Glazing Pocket Design allows for insertion of optional accessories to reduce total window  $U_w$  values where required
- 38mm wide glazing pocket accepts double glazed options up to 32mm
- Thermally Broken Sub Framing designed to support heavy double glazed frames including the option of a two piece sub jamb for easier installation
- The glazing pockets are designed to allow for the installation of large IGUs and provides the required glass cover to comply with AS1288
- Secure glazing using fully captive backing gaskets to outside of window frame allows windows to be reglazed from the inside
- Colour coded glazing wedges for ease of identification for glazing
- Available as internally or externally glazed
- Easily adapts to ThermAFrame 50mm Commercial Hinge Door and Awning Window as well as the SC95TT Sliding Door System
