- Removable chamber cover for quick re-pinning
- Bright Chrome Plated
- Lockwood C4 or Gainsborough compatible keyways
- 62mm length
- Floating cam

Maintenance

Annually inspect the door to confirm that the door operates with the correct clearances, closes and opens without obstruction. Confirm that the lock bolt or beak engages easily with the strike/catch plate when the door is closed and the lever or key is turned – adjust the door if necessary.

Annually check that when the door is closed, the lock can be locked by key and by the lever.

NB : The lock assembly has been lubricated for life, and should not be disassembled by the user.

Cleaning

Plated finishes are susceptible to tarnishing if they come into contact with moisture, wet paint, or water vapour. All plated finishes should be coated with a non-abrasive furniture or car wax immediately after installation. Plated finishes should be regularly wiped with a non-abrasive furniture or car wax, taking care not to scratch any protective finishes that are employed to protect the surface and prevent tarnishing.
