

# TraXtar™ Roller

"Designed with functional criteria in mind"

Proudly partnered with:

## Features

- 150kg load capacity enables you to build larger, heavier doors up to 300kg.
- 37mm height enables you to use low profile extrusions which reduce sightlines, making the transition between the outdoors and the indoors seamless.
- Length spreads the load over a longer section of track. Combined with a 50kg point load which exceeds current market offerings of 37.5kg, this significantly reduces rolling resistance.
- Modular designs means TraXtar™ is adaptable to most systems, making it easy to upgrade so you can confidently extend your offering to customers.
- Machined polymer tyres and stainless precision bearings give TraXtar™ wheels a quiet and smooth operation whilst providing superior durability and reliability.
- The dual layer bogie design ensures distribution weight to each wheel, adding to the product's performance.

## Reduced Rolling Resistance

When compared to other products on the market, TraXtar™ significantly reduces rolling resistance so your door and window systems can operate smoothly and with ease.

After extensive force and cycle testing, Alspec recommends the use of the TraXtar™ roller on all sliding door panels over 100kg.
