

## CUSTOMER TECHNICAL MEMO # 276

**Subject** AF7 Weatherbar Bead

**Date:** September 2016

**Author:** Product Development Team

We are pleased to advise we have redesigned AF7 the Air-Flo Weather Bar Bead to suit Breezway galleries.

The old AF7 whilst it worked with the Alspec galleries, does not allow for the correct contact of the CE57 weatherseal to the glass blades.

The revised version addresses this issue and in the redesign we have also made this bead symmetrical so it doesn't matter which way it clips into the weatherbar or the sill, it will always allow the seal to contact the glass blades correctly.

Please to following page for drawing.

To manage the transition a new code has been created for the old stock, this code is 1604293 AF77 WEATHER BAR BEAD. Old stock will be available under this code until stock has run out.

Darwin will continue to stock AF77 in Satin Black for retro-fit applications.

Kind Regards

Product Development Team
