

CUSTOMER TECHNICAL MEMO # 342

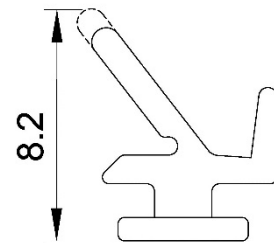

Subject: AFD002FR
Hinge Door Seal Update

Date: 14th May 2019

Author: Product Development Team

Through ongoing improvements to the Air Flo & Carinya Hinge Door systems we have changed the material properties of the frame seal to a flame retardant material to be used for bushfire conditions. This seal has a flammability index less than 5 which is required for supplying doors into a bush fire prone area.

The profile of the seal has been improved with a 1mm extension to the longer leg, this allows greater sealing compression onto the door panels. This has allowed the door frame to span up to 2400mm high x 1200mm wide subject to hardware and sealing conditions.

This seal is the standard frame seal for Air Flo & Carinya Hinge doors as it has replaced the QLON-48650FR seal which was previously required for bushfire requirements. This results in using one seal for all site conditions. The description has changed from AFD002 to AFD002FR to reflect this material change keeping the same item number. Stock will transition as it runs out as some branches are already supplying the improved product.

As a result of these improvements, we have had to revise the price of AFD002FR seal. The revised pricing will apply to all new orders received on or after Wednesday 14th June 2019, as well as orders placed with requested or estimated delivery dates on or after Wednesday 14th June 2019.

This is currently updated in the V6 and Orgadata quoting database.

Should you require any further information regarding this update, please do not hesitate to contact your local Alspec Branch or Area Manager.

Kind Regards,
Product Development Team
